

Real-World Data That Elevates Burn Care Worldwide

About BData

BData unlocks the full potential of burn care data through its proprietary platform, the Burn Care Quality Platform (BCQP) created in partnership with the American Burn Association (ABA). We generate real-world evidence that drives smarter decisions, accelerates innovation, and improves outcomes for every patient.

The BCQP contains nationwide data. This image shows all the zip codes which have cases in the BCQP.

110 of 135 U.S. burn centers leverage the BCQP to support the delivery of high quality burn care.

Technically Advanced, Fit-for-Purpose Data

BData engineers its data and analytic products with the end-purpose in mind, ensuring customers get precisely the data they need to drive meaningful outcomes.

Clinically-Driven and Focused

In partnership with the ABA, a multi-disciplinary team of burn care providers have defined the standards for what data is collected and how it is used, creating a patient registry like no other.

World Leader in Burn Data

BData is the authoritative global source for data on burn injuries, care delivery, and outcomes—supported by a team with unmatched experience in the burn domain.

600,000+

Cases in the BCQP

50+

Burn care products captured in the database

30+

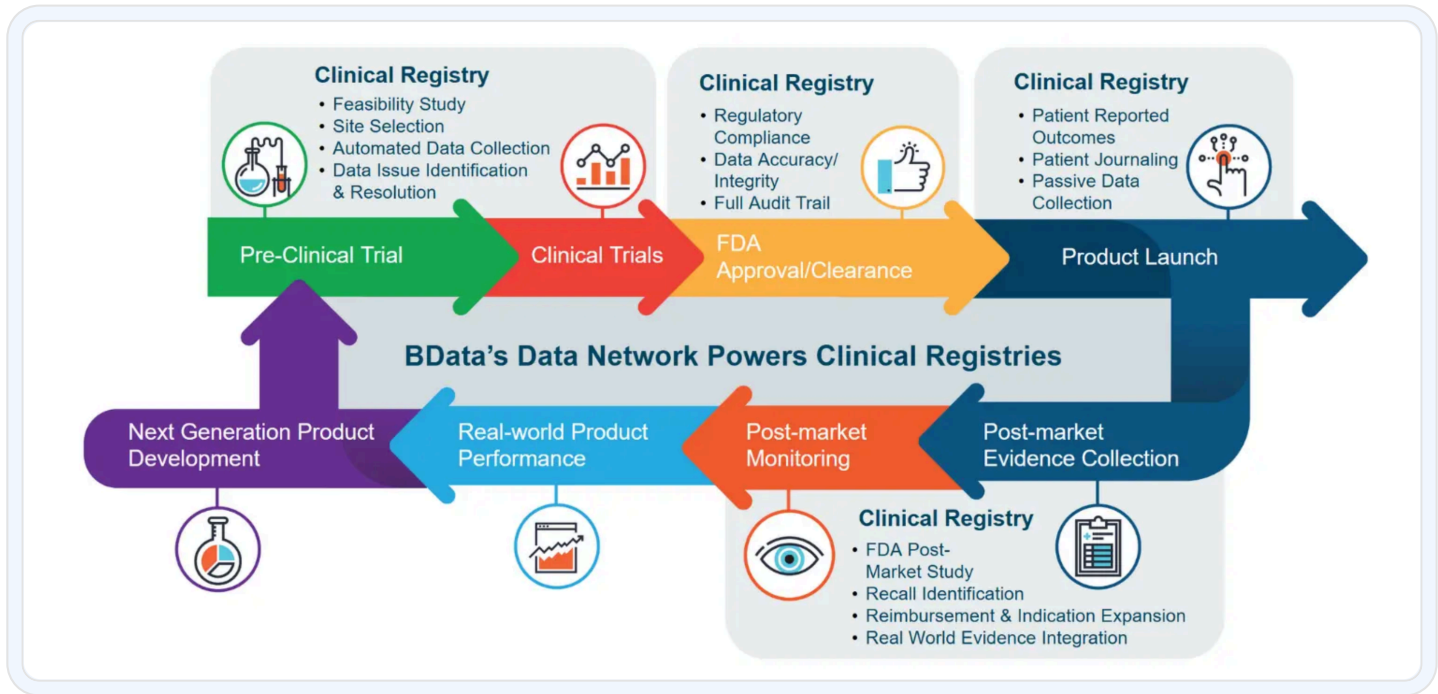

Articles published with BCQP data

20+

Years of experience in burn care

Supporting the Total Product Lifecycle

BData's established data ecosystem organically supports clinical research within the burn and wound care space.

Nine life science companies focused on burn care have partnered with BData to leverage the BCQP and advance their clinical evidence strategies.

Your team can be next.

BData Solutions For Life Science Companies

Analytics Services

Get in-depth data on product utilization by category and key clinical treatment KPIs designed to help understand treatment successes and opportunities.

Comprehensive Clinical Trial Success Program

Leveraging BCQP insights, BData collaborates to identify study site risks, monitor data collection, and align study documents with clinical practice.

Hybrid Real-World Evidence Replacement Study

We combine Real World Data (RWD) with prospective elements—to support patient replacement, augmentation, and comparator arm development—accelerating timelines, without sacrificing rigor.

FDA's Total Product Life Cycle (TPLC) Support

Utilize the BCQP's proprietary real-world evidence, gathered with burn center clinicians and the ABA, to support the FDA's Total Product Life Cycle approach for generating clinical evidence for regulatory decision making.

Post-Market Data Strategy

Use BCQP custom datasets to create peer-reviewed publications that support post-market goals with payers and provider KOLs. BData partners with you to define and build the data needed to meet your objectives.
