

RECELL® in Deep Partial-Thickness Burns

Clinical Experience and Real World Evidence

Join the American Burn Association for an educational webinar on the role of RECELL Spray-On Skin™ Cells in burn care.

DATE: WEDNESDAY, SEPTEMBER 2, 2026

TIME: 3:00 PM - 4:00 PM CDT

Deep partial-thickness burns present a common clinical challenge in burn care. As clinicians evaluate whether these wounds will progress, delays in definitive treatment can prolong hospitalization, increase treatment burden, and contribute to scarring and functional concerns. This webinar will highlight the role of RECELL® in the management of deep partial-thickness burns, drawing on clinical experience, case-based insights, and growing real-world evidence.

Join Dr. Jonathan Schoen and Dr. Victoria Miles as they share practical perspectives from their experience treating burn patients with RECELL, including cases that demonstrate rapid healing, functional recovery, pigmentation, and aesthetic outcomes. The faculty will also present new findings from the American Burn Association Burn Care Quality Program (BCQP), illustrating how RECELL is associated with shorter hospital length of stay, increased patient throughput, and meaningful healthcare resource savings. Attendees will gain perspective on integrating RECELL into contemporary burn care while improving outcomes for both patients and healthcare systems.
